Uiwon Hwang

+82-10-9461-2053 uiwon.hwang@snu.ac.kr

Education

Ph.D. Candidate - Electrical and Computer Engineering Mar 2017 – Present

- Seoul National University, Seoul, Korea
- Research interests: Deep generative models, Biomedical data science, Secure AI

Bachelor of Engineering - Biomedical Engineering Mar 2013 – Aug 2016

- Korea University, Seoul, Korea
- Early graduation, with 2nd place in the year (Major GPA: 4.43/4.50, Overall GPA: 4.35/4.50)
- Thesis title: 3D convolution networks for classification: Studies on Attention Deficit Hyperactivity Disorder and Alzheimer's diseases

Experience

Undergraduate Researcher Mar 2015 – Aug 2016

- Brain Reverse Engineering by Intelligent Neuroimaging (BREIN) Lab., Korea University — Seoul, Korea
  - Analyzed Magnetic Resonance Imaging (MRI) for Attention Deficit Hyperactivity Disorder (ADHD).
  - Studied machine learning, deep learning, bioinformatics, and medical imaging.

Research Internship Sep 2016 – Feb 2017

- Data Science & Artificial Intelligence Lab., Seoul National University — Seoul, Korea
  - Studied machine learning, deep generative models.
  - Analyzed medical data to predict a recurrence of breast cancer.

Projects

ADHD Diagnosis Dec 2015 – Aug 2016

- Developed 3D convolutional neural networks to classify brain MRIs of ADHD subtypes.

Watchrone May 2016 – Jul 2016

- Collaborated with industrial designers.
- Devised an idea of a smartwatch combined with a drone for a sudden attack situation.

Intelligent Tutoring System Jun 2017 – Dec 2017

- Studied Deep Knowledge Tracing (DKT) used in Intelligence Tutoring System (ITS) to maximize learning effect of a student.
- Developed a trustworthy knowledge tracing model to trace a real learning process of a student.

Personalized Healthcare System Sep 2016 – Nov 2018

- Developed machine learning and deep learning models to predict an occurrence, recurrence, and mortality of breast cancer using electronic health records.

Real World Classification Jun 2018 - Jun 2019

- Interpreted three problems in real world data (missing data, class imbalance, and missing label problems) from a single perspective.
- Developed Generative Adversarial Networks (GANs) to achieve the best classification performance.

Secure & Private AI Jan 2019 - Present

- Studied adversarial attacks, membership inference attacks, and differential privacy.
- Developed a Variational Autoencoder (VAE) to defend adversarial attacks.

Awards

Semester High Honors for Fall 2013, Spring 2014, Fall 2014, Spring 2015, Fall 2015, and Spring 2016

Semester Highest Honors for Fall 2014 and Spring 2015

President's List for Fall 2015

Finalist, Spark Design Awards: Spring Concept, 2016

Best Presentation Award, Korea Software Congress, 2017
